WHAT IS A ROLLER?

A roller is generally identified as a wheel which performs a rolling activity. Rollers come in various shapes and sizes and may be used as a stand-alone component or as part of an assembled unit, often referred to as a carriage or a hanger.

WHAT IS A CARRIAGE?

A carriage is an assembly containing a wheel, or multiple wheels, used at the bottom of a sliding window or door. Carriages are usually designed such that they fit into specific extrusions or cut-outs in timber and roll on a bottom track.

WHAT IS A HANGER?

A hanger is an assembly containing a wheel, or multiple wheels, used at the top of a sliding window or door. Hangers usually fit onto the face, edge or top of doors which hang from a track.

Both carriages and hangers often (but not always) contain a height adjustment mechanism.

Associated parts for rollers, carriages and hangers can include the following:

1 - HOUSING

A housing is generally the carriage without the wheel.

2 - BRACKET

A bracket is generally the hanger without the wheel.

3 - AXLES

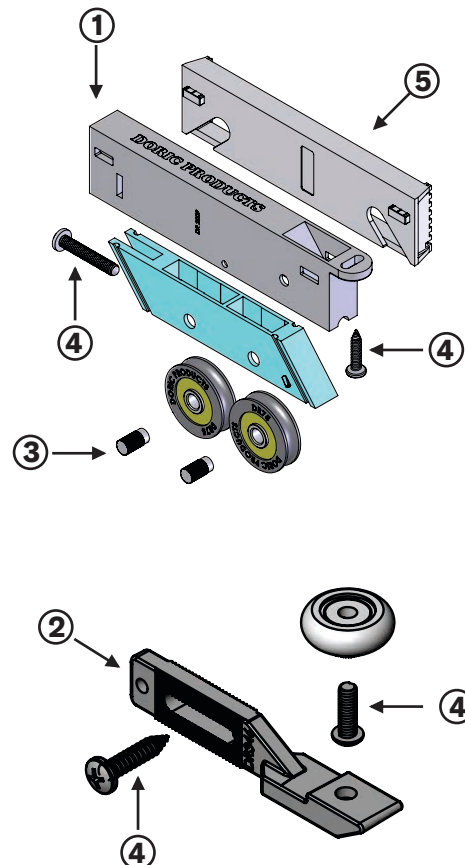

A centre shaft or spindle on which the wheel revolves.

4 - SCREWS

The fastener for wheels to hangers as well as for adjustment mechanisms and fixing hardware in place.

5 - PACKERS

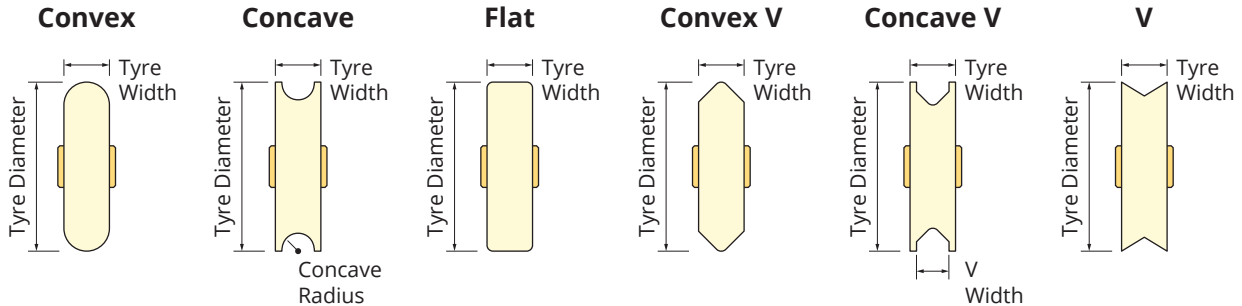

An add-on component used for creating, filling or maintaining a space between two items - such as a carriage inside an extrusion.

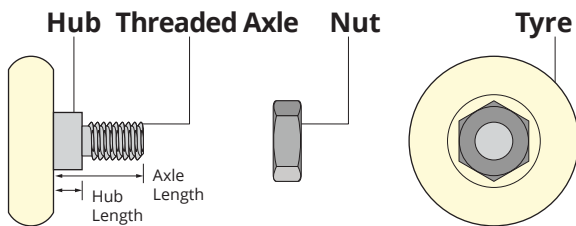

Wheels and rollers can come in a variety of shapes and sizes.

WHEEL PROFILE EXAMPLES

Wheels, Rollers and Sheaves will generally contain one of these profiles

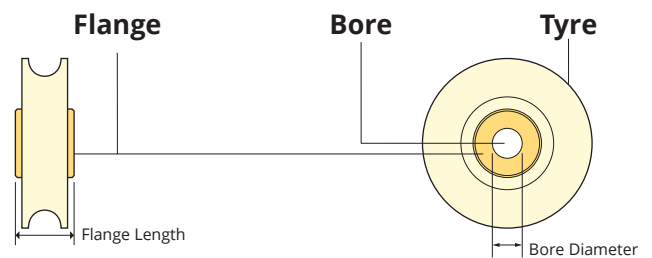

WHEEL WITH AXLE & NUT

Some units may also contain a washer(s)

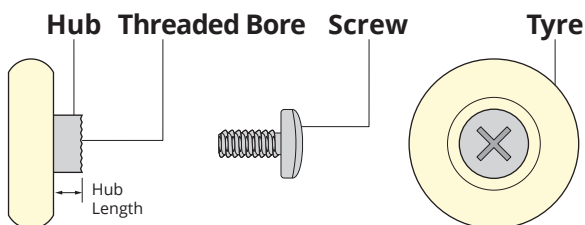

Wheels with axle and nut are generally used on hangers and fix through a hole in a bracket. The nut screws over a threaded axle protruding from the wheel hub.

WHEEL WITH BORE

Wheels with bore (or hole) are generally used in carriages and fitted to housings via a rivet, a pin, a pressed axle or even a removable axle.

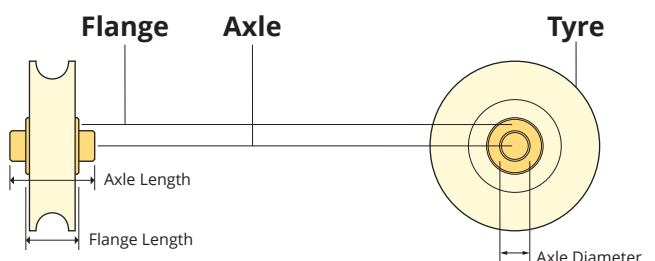

WHEEL WITH AXLE SCREW

Some units may also contain a washer(s)

Wheels with axle screw are generally used on hangers and fix through a hole in a bracket. The screw tightens into a threaded bore within the wheel hub.

WHEEL WITH FIXED AXLE

Wheels with fixed axles are generally used in carriages and fitted to housings via a clip-in axle slot.

DR1000 | ROLLER SERIES

The DR1000 Series rollers are high performance products suited for residential or commercial sliding window & door applications.

Manufactured with an engineered polymer outer carriage housing and passivated zinc inner carriage, this adjustable roller offers superior corrosion resistance and durability.

The DR1000 roller provides great performance and is moulded with a high performance engineered polymer that gives superior load rating and cycle testing.

PRODUCT DETAILS

OUTER CARRIAGE	Engineered polymer
INNER CARRIAGE	Cast zinc passivated
TYRE	DR2 polymer with bearing, or DR71 high performance polymer with "ZZ" bearing
FINISH AVAILABLE	Black
MAX LOAD CAPACITY	20kg
TESTING	Tested to 30,000 cycles

FEATURES

- Fully adjustable carriage gives 10mm height adjustment
- Outer carriage and internal assembly manufactured to withstand corrosive environments
- Roller 'ZZ' bearing with ground precision bearing for corrosion free operation
- Polymer roller with bearing
- Passivated metal inner carriage
- Stainless steel adjusting screw and nut width away from the pivot centre

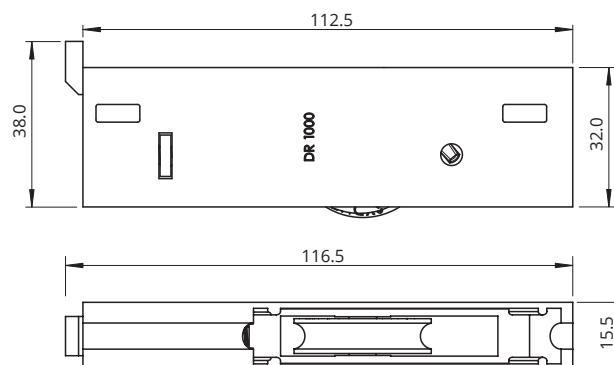

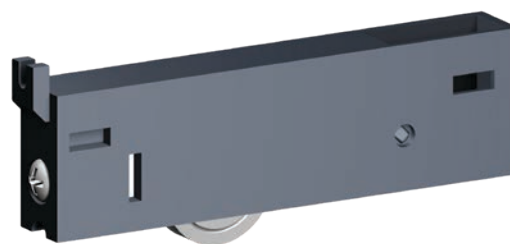

ADVANTAGES

- Suits aluminium, timber and UPVC sliding doors

DR2210 | MULTI-PURPOSE HEAVY DUTY ADAPTABLE ROLLER

The DR2210 roller is a multi-purpose heavy duty patio door roller designed in Australia by Doric's engineering team to suit residential and commercial aluminium and uPVC sliding doors in high performance capacity.

Manufactured with an engineered polymer outer carriage housing and cast passivated black aluminium inner carriage, this adjustable roller offers superior corrosion resistance and durability.

The DR2210 roller provides “ZZ” bearing performance rating and is moulded with a high performance engineered polymer that gives excellent load rating and cycle testing.

Additionally, the aluminium inner carriage has been designed to provide greater cover and protection to the wheels, helping avoid chipping and other damage occurring prior to installation.

ADVANTAGES

- Suits aluminium and uPVC sliding doors
- Fully adjustable carriage gives 10mm height adjustment with Stainless steel adjusting screw and nut
- Outer carriage and internal assembly manufactured to withstand corrosive environments
- High performance roller with corrosion resistant ground precision “ZZ” bearing and dust seal
- Cast passivated black aluminium inner carriage designed to protect wheels and minimise damage prior to installation
- Recommended for larger sliding doors up to 200kg
- Unique multi-fit end caps that are quick to connect

DR4000 | QUAD ROLLER

The DR4000 Quad Roller is a high performance roller carriage assembly consisting of 4 x "ZZ" precision bearing rollers with Ryvelin tyres for smooth operation and durability.

The combination of an engineered polymer outer carriage, stainless steel middle carriage and cast zinc inner carriage is designed to support door weights up to 280kg.

ADVANTAGES

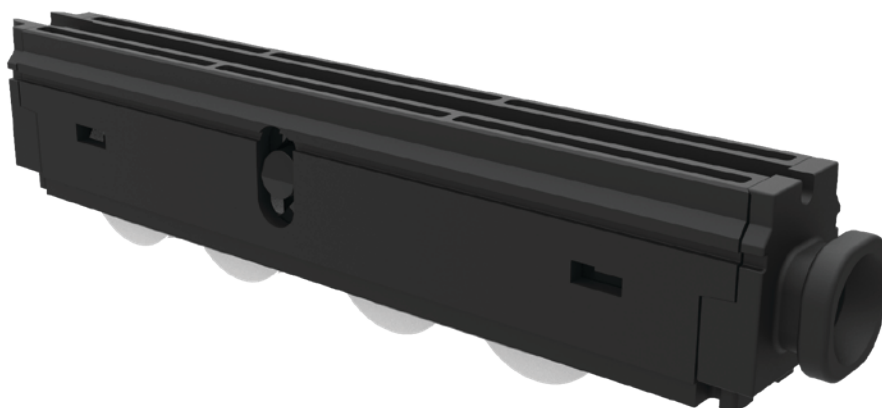

- Fully adjustable carriage gives 8.5mm height adjustment
- High performance rollers with ZZ bearing seal
- Ryvelin tyres for smooth operation and durability
- Stainless steel pivot pins and bearing axles
- Cycled test to 30,000 cycles
- Maximum Carriage Load Rating 140kg (280kg Door)

PRODUCT DETAILS

DR234 | SECURITY DOOR ROLLER

The DR234 Series Roller is a high performance security roller. It features side lugs for optimum fitting, spring loaded inner carriage and adjustability by up to 7.5mm.

The DR234 uses a precision bearing and a tyre made from high impact polymer housing to be both efficient and highly durable.

ADVANTAGES

- Ideal for coastal application
- Spring loaded
- 7.5mm of adjustment
- Highly durable

FEATURES

- Increased support around the adjusting screw
- Hi Impact Polymer Housing
- Wheel hold back function with DR234/N for easier installation
